

Bio exercise

Create a Webpage Using HTML

Work with a partner to implement the following user story:

As a student, I want to create a biography page that includes an image, a paragraph about me, and my contact information.

Acceptance Criteria

It's done when the main header reads "Student Bio".

It's done when there is a section that includes a name, an image, and a paragraph.

It's done when there is a second section that includes a subheader labeled "Contact Info" and a list that includes links to my email, GitHub, and portfolio.

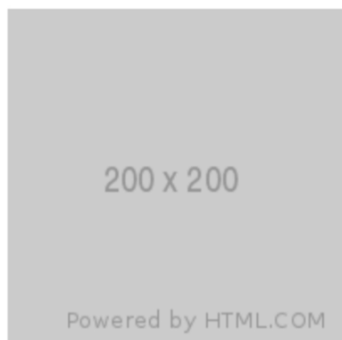

It's done when the finished page matches the mockup.

Assets

The following image demonstrates the web application's appearance and functionality:

Student Bio

Your Name

Write a short paragraph or two about yourself

Contact Info

- **Email:** someplace@gmail.com
- **Github:** [sampleName](#)
- **Portfolio:** [coming soon](#)

The link to the placeholder image to use is <https://via.placeholder.com/200x200>

Hints

How can you use header elements to define the most important heading and the subheaders? How does using different header elements impact the size of the text?

Bonus

If you have completed this activity, work through the following challenge with your partner to further your knowledge:

What are the advantages of using semantic HTML elements?

Use [Google](#) or another search engine to research this.
